On Wednesday, October 31, 2018, Alamogordo High School Principal, Dr. Kenneth Moore notified parents of students attending welding classes that the welding program has been temporarily suspended due to safety concerns. Counselors are working with students to temporarily move them to another elective until safety issues are fixed and secured.

Roof leaks were discovered due to large amounts of rain. The presence of water in an environment of electric welders creates a safety issue. The APS Maintenance department is currently working on solutions to repair the roof.

As always, the safety of our students is our priority.
